Probabilistic Analysis of the First Zagreb Index

Journal: Transactions on Combinatorics (Trans. Comb. or TOC)

Author(s): Ramin Kazemi

Abstract: In this paper we study the first Zagreb index in bucket recursive trees containing buckets with variable capacities. This model introduced by Kazemi in 2012. We obtain the mean and variance of the first Zagreb index and introduce a martingale based on this quantity.

Key words: Bucket recursive trees with variable capacities of buckets, the first Zagreb index, martingale.
